Stakeholder Management

Stakeholders are the people and organisations affected by the project; managing their expectations and engagement is decisive for acceptance of the result.

PMBOK Guide 7th ed. PRINCE2 7 Case study: Realtime Quiz pilot

AGENDA

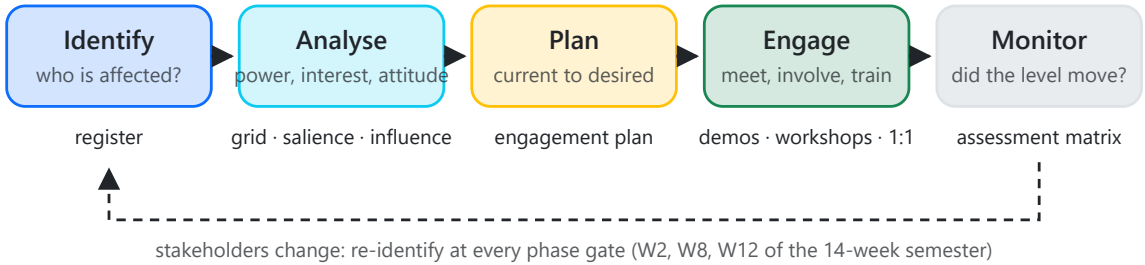

What we will cover

1. Identifying stakeholders: sponsors, users, operations, vendors, regulators, the public
2. Stakeholder register and stakeholder analysis attributes
3. Power/interest grid, salience model and influence maps
4. Engagement levels: unaware, resistant, neutral, supportive, leading
5. Stakeholder engagement plan and engagement assessment matrix
6. Managing expectations, resistance and organisational change
7. Sponsor relationship and governance boards
8. Users as stakeholders: user involvement, acceptance, training and adoption
9. Monitoring engagement and adapting the plan
10. Ethics and transparency with stakeholders
11. Chapter Quiz
12. Lab-11

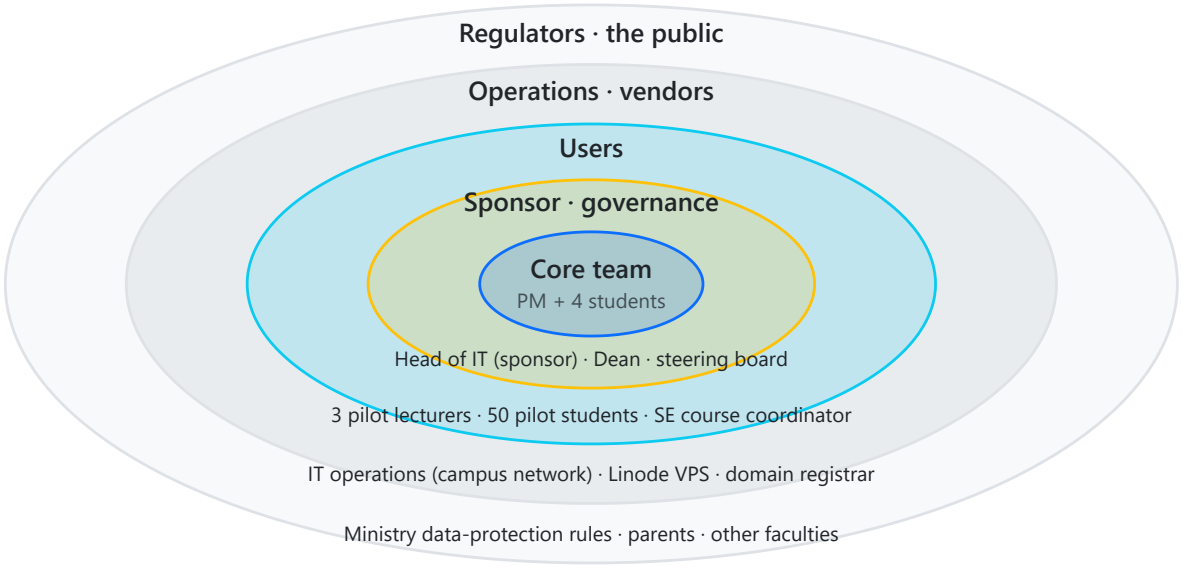

Click any item to jump directly to that topic.

Delivered is not the same as accepted

- **Stakeholder** (PMBOK Guide 7th ed.): an individual, group or organisation that may affect, be affected by, or *perceive itself* to be affected by a decision, activity or outcome of the project.
- The Realtime Quiz app can pass every test and still fail: if the three pilot lecturers keep handing out paper quizzes in week 14, the project delivered software but produced no outcome.
- Chapter 10 planned *information* flows. This chapter plans *relationships*: who must want the result, who can stop it, and what we do about both.
- Stakeholder management is a cycle that runs from the charter (Lab-01) to the pilot: identify, analyse, plan, engage, monitor, and back to identify.

Identifying stakeholders: rings around the project

- **Sponsor**: pays, decides, defends the project. Realtime Quiz: the Head of the IT department.
- **Users**: people whose daily work changes. Lecturers author and run quizzes; students play them on their phones.
- **Operations**: keep it running after the team leaves. Campus IT must let WebSocket traffic through the proxy.
- **Vendors**: Linode (VPS at gicitc.com, about 25 USD per month), the domain registrar, optional paid tools.
- **Regulators**: rules the project must obey even if nobody from the ministry ever attends a meeting.
- **The public**: parents, other faculties, anyone who reads about the pilot. Low involvement, high reputational reach.

> 💡 The closer the ring, the more often you talk; the outer rings can still stop the project (a data-protection complaint, a network policy).

Techniques and the first identification worksheet

Technique	What you do
Brainstorm by ring	Walk the onion ring by ring and ask "who belongs here?"
Document review	Charter (Lab-01), org chart (Lab-08), vendor list, risk register (Lab-09).
"Who loses?"	Every change has a loser: paper-quiz lecturers lose a routine they trust.
Snowballing	Ask each stakeholder "who else should we talk to?" until no new names appear.
Regulation scan	Which rules touch student data, campus networks, procurement?

⚠ Missing a stakeholder is cheap in week 2 and expensive in week 13: the proxy rule request that nobody raised takes IT operations three weeks.

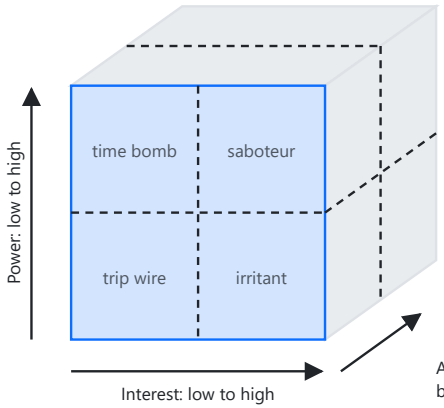

```
Stakeholder identification worksheet: Realtime Quiz pilot (W2)
Ring          Candidate                    Source           Keep?
------------  ---------------------------  ---------------  -----
Sponsor       Head of IT department        charter          yes
Governance    Dean of Faculty              org chart        yes
Governance    SE course coordinator        charter          yes
Users         3 pilot lecturers            "who loses?"     yes
Users         50 pilot students            charter          yes
Users         other lecturers (future)     snowballing      later
Operations    campus IT operations         risk R-07 proxy  yes
Vendors       Linode (VPS, 25 USD/month)   budget Lab-06    yes
Vendors       domain registrar (gicitc.com) budget Lab-06   merge
Regulators    Ministry data-protection     regulation scan  yes
Public        parents of pilot students    "who loses?"     yes
Public        student union                snowballing      later
Result: 12 stakeholders in the register (S01..S12), 2 parked.
```

The stakeholder register: one row per stakeholder worked example

ID	Stakeholder	Ring	Main expectation	Power 1-5	Interest 1-5	Attitude	Classification
S01	Head of IT department	Sponsor	Working pilot in W14, no reputational damage	5	5	+	Manage closely
S02	Supervising lecturer (PM)	Core team	Plan followed, students learn PM by doing	4	5	+	Manage closely
S03	Student team (4)	Core team	Clear scope, fair grade in both courses	2	5	+	Keep informed
S04	Pilot lecturers (3)	Users	Reliable in class, less grading effort	3	4	0 / -	Manage closely
S05	Pilot students (50)	Users	Works on my phone, fair scores, fun	1	4	0	Keep informed
S06	SE course coordinator	Governance	Product meets the SE course rubric	3	4	+	Manage closely
S07	Dean of Faculty	Governance	Teaching quality, no complaints	4	2	0	Keep satisfied
S08	IT operations (campus network)	Operations	No incident; proxy rule documented	4	2	0	Keep satisfied
S09	Linode and domain registrar	Vendor	Invoices paid, fair-use policy respected	3	1	0	Keep satisfied
S10	Ministry data-protection rules (DPO)	Regulator	Student data lawful, minimal, retained per rule	5	1	0	Keep satisfied
S11	Parents	Public	Children's data not exposed, no public shaming	1	1	0	Monitor
S12	Other lecturers (future users)	Users	Hear about it only after a successful pilot	2	2	0	Monitor

Full register columns (Lab-11): id, name, ring, role, interest (what they want), influence, expectations, attitude (+ / 0 / -), contact, owner on the team, classification, engagement C and D. The register is **confidential**: attitude ratings are never shown to the stakeholders themselves.

Analysis attributes: what the columns mean

Attitude: front negative, back positive

Back face (positive attitude)

Champion: P high · I high · use as a voice
Sleeping giant: P high · I low · wake up
Friend: P low · I high · confidant, tester
Acquaintance: P low · I low · keep informed

Front face (negative attitude)

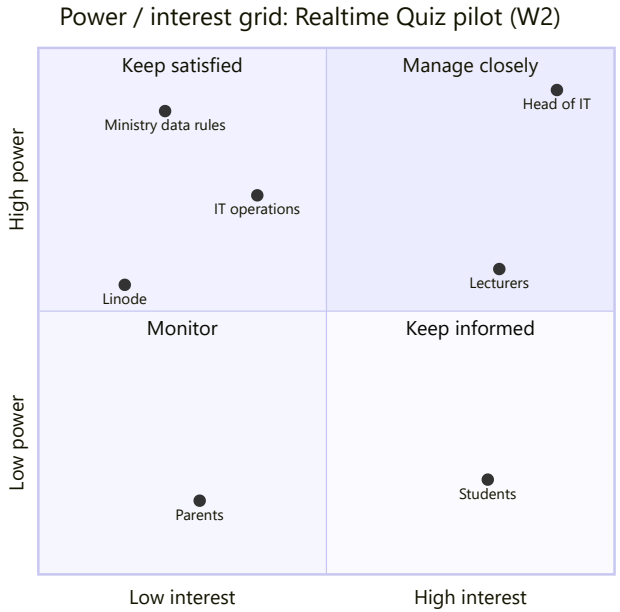

Saboteur: P high · I high · engage first
Time bomb: P high · I low · defuse early
Irritant: P low · I high · listen, contain
Trip wire: P low · I low · watch

Stakeholder cube after Murray-Webster and Simon (2006)

Attribute	Question it answers	Scale
Power	Can they stop, fund or redirect the project?	1 none .. 5 can cancel
Interest	How much do they care about the outcome?	1 indifferent .. 5 daily concern
Influence	Whose opinion do they move? (influence map)	edge weight 0..1
Impact	How much does the project change their work?	1 none .. 5 job redesigned
Attitude	For, neutral or against, today?	+ / 0 / -
Legitimacy, urgency	Is their claim proper? Is it time-critical?	yes / no (salience model)

```
stakeholder-register.csv (header + one row)
id,name,ring,role,expectation,power,interest,attitude,contact,owner,class
S04,Pilot lecturers,Users,run quizzes in class,"reliable, less
 grading",3,4,-,lecturers-list,PM,Manage closely
```

The power/interest grid: four quadrants, four strategies

```
quadrantChart
  title Power / interest grid: Realtime Quiz pilot (W2)
  x-axis Low interest --> High interest
  y-axis Low power --> High power
  quadrant-1 Manage closely
  quadrant-2 Keep satisfied
  quadrant-3 Monitor
  quadrant-4 Keep informed
  Head of IT: [0.90, 0.92]
  Lecturers: [0.80, 0.58]
  Students: [0.78, 0.18]
  IT operations: [0.38, 0.72]
  Linode: [0.15, 0.55]
  Ministry data rules: [0.22, 0.88]
  Parents: [0.28, 0.14]
```

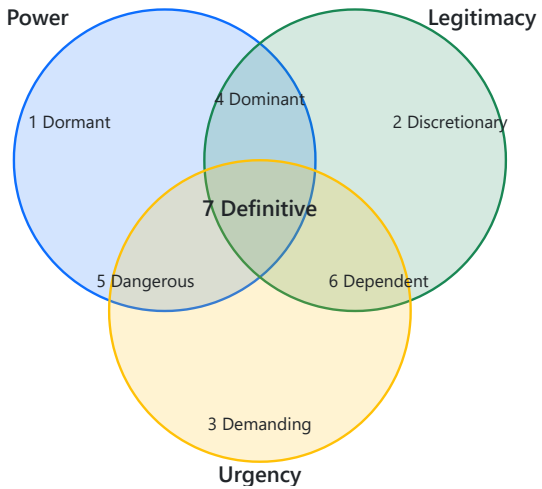

Coordinates: x = interest / 5, y = power / 5 from the register. quadrant-1 is top right, quadrant-2 top left, quadrant-3 bottom left, quadrant-4 bottom right. You will draw this grid in Lab-11, Task 2.

TOPIC 3

Strategy per quadrant, and a second lens: salience

Quadrant	Realtime Quiz	Strategy and typical actions
Manage closely high power, high interest	Head of IT, pilot lecturers, SE coordinator	Involve in decisions; steering board seat; demos every two weeks; 1:1 when attitude drops.
Keep satisfied high power, low interest	IT operations, Ministry data rules, Linode, Dean	Short, precise asks; no surprises; checklist sign-off; brief through the sponsor.
Keep informed low power, high interest	Pilot students, student team	Announcements, demo quiz, feedback survey; they become your champions or your critics.
Monitor low power, low interest	Parents, other lecturers	Privacy note on the join page; watch for a move to another quadrant.

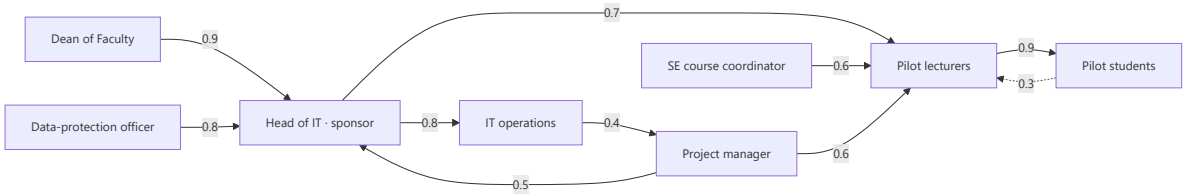

The grid is a snapshot: a parent who complains publicly moves from Monitor to Manage closely overnight.

7 Definitive: Head of IT
4 Dominant: Ministry data rules
6 Dependent: pilot students
5 Dangerous: lecturer criticising the pilot in public
1 Dormant: Linode
2 Discretionary: parents
3 Demanding: "dark mode now"

Mitchell, Agle and Wood (1997)

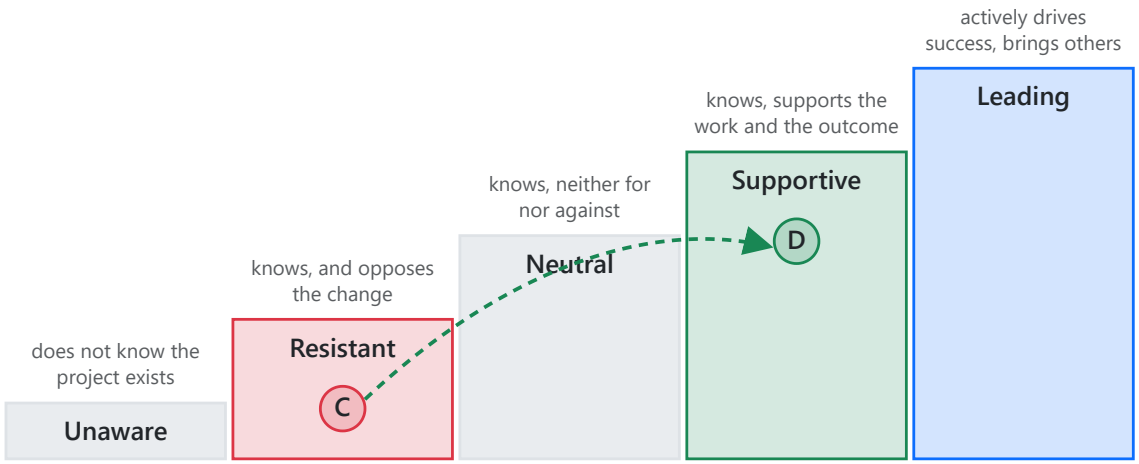

Influence map: who moves whom, and by how much

- Nodes are stakeholders, arrows point from influencer to influenced, the weight (0..1) says how much one opinion moves the other.
- Use it to find the **path** to a stakeholder you cannot convince directly. Path strength = product of the weights.
- Dotted arrows are weak or informal channels; they still matter in a classroom.

```
Goal: move the pilot lecturers (LEC) to Supportive.
Path A  PM -> LEC                    0.6          = 0.60
Path B  PM -> HIT -> LEC             0.5 x 0.7    = 0.35
Path C  DEAN -> HIT -> LEC           0.9 x 0.7    = 0.63
Path D  SEC -> LEC                   0.6          = 0.60
Decision: the PM talks directly (A) and asks the sponsor to
brief the Dean after the W8 demo so that C reinforces A.
Weak link: STU -> LEC is 0.3; enthusiastic students help
a little, they do not replace the lecturer conversation.
```

Five engagement levels: from unaware to leading

C = current, D = desired (pilot lecturers, W2): two steps to climb, at least one planned action per step

Level	What you hear in the corridor
Unaware	"Which quiz app?"
Resistant	"Paper never crashes. I will not use it."
Neutral	"Show me when it works, then we will see."
Supportive	"I will try it in my Tuesday class."
Leading	"I told the other lecturers to join the pilot."

📖 Levels and the C / D notation follow the PMBOK Guide (stakeholder engagement assessment matrix). Rate on evidence you heard or saw, never on hope.

Engagement assessment matrix: current (C) versus desired (D) worked example, W2

Stakeholder	Unaware	Resistant	Neutral	Supportive	Leading	Gap
S01 Head of IT (sponsor)				C	D	1
S04 Pilot lecturers		C		D		2
S05 Pilot students	C			D		3
S06 SE course coordinator				C D		0
S07 Dean of Faculty			C	D		1
S08 IT operations			C	D		1
S09 Linode			C D			0
S10 Ministry data rules (DPO)	C		D			2
S11 Parents	C		D			2

- **C** = where the stakeholder is today, based on what they said or did. **D** = the level the project needs to succeed, not the level you would like.
- D is not always "Leading": Linode should stay neutral; the Ministry rules only need to be met, so D = Neutral (aware and satisfied).
- Gap = number of steps between C and D. Gaps of 2 or more get several actions spread over weeks; a gap of 0 still gets maintenance (keep informed).
- Engagement index = mean level (Unaware 0 .. Leading 4). W2: (3+1+0+3+2+2+2+0+0) / 9 = 1.4; target for W14: 2.7.

⚠ The matrix is confidential (it says "resistant" next to a colleague's name). Store it with the register, not on the project wiki.

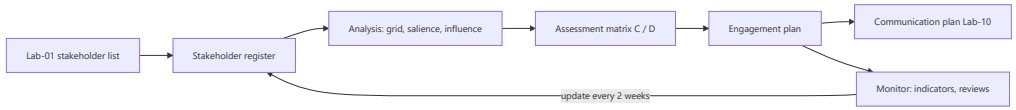

The engagement plan: actions that close each gap worked example

Stakeholder	C to D	Engagement actions	Owner	When	Success measure
S01 Head of IT	S to L	Sign the sponsor agreement; open the W8 MVP demo and the W14 pilot; 20-minute 1:1 every two weeks.	PM	W2, W8, W14	Decisions within 3 working days; attends 7 of 7 steering meetings
S04 Pilot lecturers	R to S	Listening session on paper-quiz concerns; CSV import of existing questions; shadow session with a champion; 1-page quick start; paper fallback pack.	PM, team lead	W3, W6, W10, W13	All 3 run a live quiz in W14; satisfaction at least 4 of 5
S05 Pilot students	U to S	Class announcement; 10-minute demo quiz; survey after each session; nickname option explained.	Lecturers, team	W12, W13, W14	At least 42 of 50 active in 3 or more sessions
S07 Dean	N to S	Sponsor briefs the Dean after the MVP demo; invitation to the W14 pilot session.	Head of IT	W8, W14	Dean attends or sends a written note of support
S08 IT operations	N to S	Seat on the steering board; joint security review; proxy rule request in writing; runbook handover.	PM	W2, W11, W12	Proxy rule approved before W13; runbook accepted
S10 Ministry data rules	U to N	Data-protection checklist reviewed with the DPO; transparency note published on the join page.	PM	W6, W12	Checklist signed before the pilot
S11 Parents	U to N	Privacy note visible on the join page; no ranking published outside the class.	Team	W12	Zero complaints during the pilot

Every action has an owner, a week that exists in the Lab-05 schedule, and a measure you can check. Actions that are pure information (status report, newsletter) belong in the communication plan of Lab-10; the engagement plan refers to them instead of duplicating them.

TOPIC 5

From register to plan: how the documents feed each other

💡 Communication plan = *what information* goes to whom and when. Engagement plan = *what relationship change* we need and which actions produce it. One row of the engagement plan may need three rows of the communication plan.

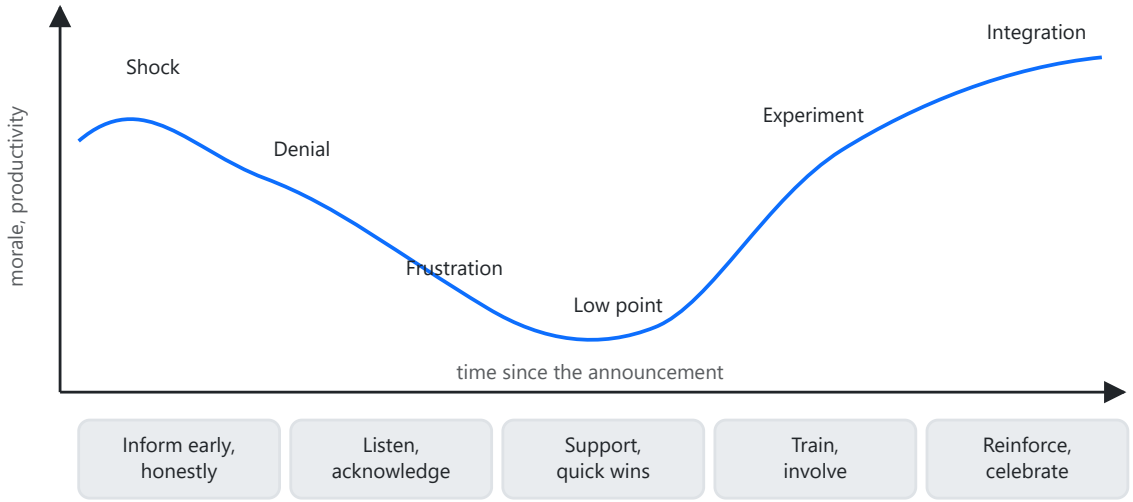

```
# Stakeholder engagement plan (lab11/engagement-plan.md)

| Id  | Stk | C | D | Action               | Owner | Wk  | Measure     | Comm  |
|-----|-----|---|---|----------------------|-------|-----|-------------|-------|
| E01 | S04 | R | S | Listening session    | PM    | W3  | 3 concerns  | CP-04 |
| E02 | S04 | R | S | Import their quizzes | Lead  | W6  | 40 imported | CP-04 |
| E03 | S05 | U | S | Demo quiz in class   | Lect. | W13 | 50 joined   | CP-07 |

Rules
- C and D use the five levels: U, R, N, S, L.
- Week must exist in the Lab-05 schedule; the action is added there as a task.
- Comm ref points to a row of lab10/communication-plan.md (add one if missing).
- Review every two weeks in the steering meeting; log changes at the bottom.
```

TOPIC 6

Managing expectations, resistance and organisational change

- **Expectations** are promises the stakeholder believes you made. Write them down (register column), confirm them back, and correct them early: "the pilot has 50 students, not the whole faculty".
- **No surprises**: the sponsor hears bad news from you within 24 hours, never first in a meeting (Chapter 10).
- **Resistance is information**: it tells you which loss the stakeholder fears (control, time, competence, status). Treat the cause, not the symptom.
- **Organisational change**: people move along the curve at their own pace; the PM's job is to shorten the dip with the five actions below the curve (curve adapted from Kübler-Ross).

⚠ Escalating a resistant lecturer to the sponsor in week 3 turns resistance into hostility. Escalate only after listening and offering options.

Resistance handling plan: lecturers who prefer paper quizzes worked example

What we hear	Underlying concern	Response action	Owner	Week
"Paper never crashes."	Reliability, control in front of 50 students	Paper fallback pack and offline result entry; live rehearsal with 30 students in W10 shown to the lecturers.	Team lead	W10
"I already have 200 questions on paper."	Sunk effort, retyping	CSV and JSON quiz import; the team types the first 40 questions for each lecturer.	Team	W6
"Phones distract students."	Classroom discipline	Question on the projector, phone only for answering, timer per question, lecturer can lock the session and remove a participant.	PM, lecturer	W8
"I have no time to learn a tool."	Learning cost	1-page quick start; 20-minute shadow session where a champion lecturer runs the quiz and the resistant lecturer watches.	PM	W13
"Scores must be fair."	Grading trust	Show the scoring rule (server deadline plus 250 ms grace); export results as CSV so the lecturer can check them.	Team	W10

```
Guardrails for the plan
- Adoption in the pilot is voluntary;
  the sponsor says so in writing.
- A champion lecturer speaks to peers;
  the PM does not "sell".
- One concern, one action, one owner.
- Re-assess C after each action:
  W3 R -> W8 N -> W13 S (target).
- If still Resistant in W12: keep the
  paper class out of the pilot, no
  escalation, revisit next semester.
```

Success: two of three lecturers run a quiz by W13; the third joins after seeing the results CSV.

The sponsor: one page that says what each side commits to worked example

```
# Sponsor agreement: Realtime Quiz pilot (v1.0, signed W2)
Sponsor: Head of IT department    Project manager: supervising lecturer

## The sponsor commits to
1. Chair the steering board every two weeks (W2 to W14), 45 minutes.
2. Decide on escalations within 3 working days, in writing.
3. Own the budget: Linode VPS 25 USD/month, domain gicitc.com,
   about 4 person-months of student and lecturer time.
4. Champion the pilot: brief the Dean after the W8 MVP demo, invite the
   three pilot lecturers personally, open the W14 pilot session.
5. Remove blockers outside the team's reach: proxy rule for WebSocket
   (IT operations), room booking, data-protection sign-off.
6. Accept or reject the result against the criteria below, in W14.

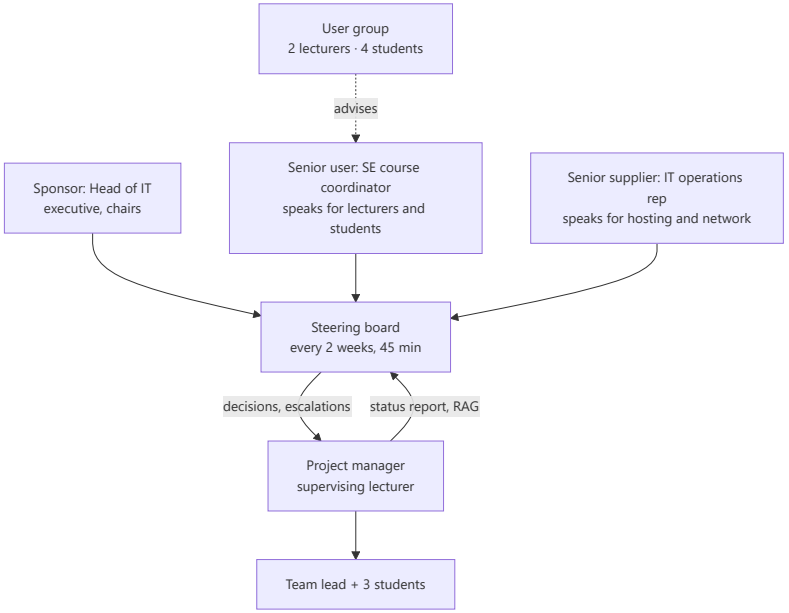

## The project manager commits to
- A two-page status report every second Friday: RAG, top 3 risks,
  decisions needed. Bad news within 24 hours, never first in a meeting.
- No scope change without a change request on the steering agenda.

## Acceptance criteria for the pilot (W14)
- 3 lecturers each run a live quiz with 40 or more students connected.
- Broadcast latency under 500 ms on the campus LAN; zero lost answers.
- Student survey median at least 4 of 5; data-protection checklist signed.
```

- The sponsor is the **owner of the business case**: provides resources, makes the decisions the PM cannot, and defends the project when it is attacked.
- A sponsor who is "supportive" but invisible is a risk: decisions wait, the Dean never hears about the pilot, IT operations ignore an unsigned request.
- The one-page agreement turns goodwill into **observable commitments** (time, decisions, budget, visibility) and gives the PM a polite way to remind.
- PRINCE2 7 calls this role the *executive* of the project board, sitting between the *senior user* and the *senior supplier*.

Ask the sponsor to write the acceptance criteria in their own words. What they write is what they will accept.

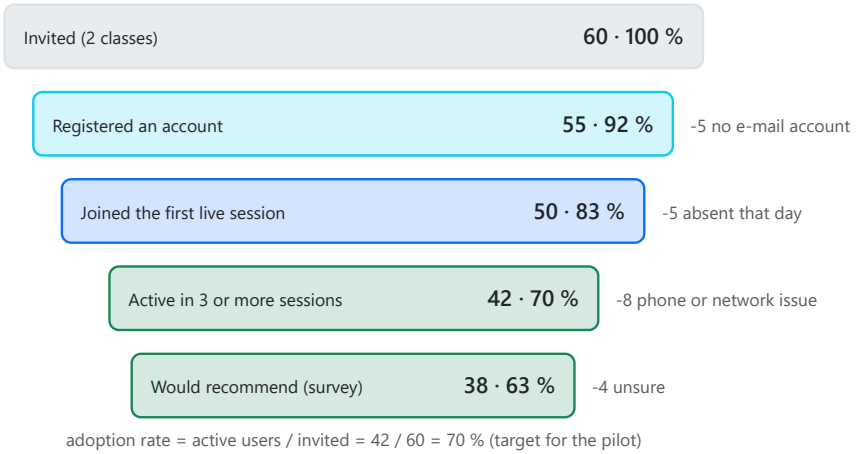

Governance: the steering board and its terms of reference

ToR item	Realtime Quiz steering board
Purpose	Decide scope changes, release the pilot, resolve escalations.
Members	Sponsor (chair), senior user, senior supplier, PM (secretary); team lead attends for demos.
Frequency	Every two weeks, W2 to W14, 45 minutes; extra meeting on a red RAG.
Quorum	Sponsor plus one of senior user or senior supplier.
Inputs	Status report (Lab-10), decision requests, change requests, engagement review.
Outputs	Minutes within 2 working days: decisions, actions, owners, dates.
Decision rule	Sponsor decides after hearing both senior roles; tie goes to the sponsor.
Escalation	PM to sponsor within 24 hours; sponsor to Dean if outside IT authority.

Board structure after PRINCE2 7 (executive, senior user, senior supplier), sized for a 14-week student project.

Users as stakeholders: involvement, acceptance, adoption

- **Involvement**: a user group (2 lecturers, 4 students) sees a demo every two weeks from W4 and tests the play page on their own phones. Users who shaped the product defend it.
- **Acceptance**: the senior user signs acceptance criteria written in user language ("a student who loses Wi-Fi for 10 seconds keeps their score"), not in test-case language.
- **Training**: as short as possible, as late as possible, hands-on: a 45-minute lecturer workshop in W12, a 10-minute demo quiz for students in W13.
- **Adoption** is measured, not assumed: registered, joined, active, would recommend. Each drop in the funnel has a cause and an action.

```
Pilot targets (agreed with the senior user, W8)
registered / invited     >= 90 %   (55 / 60)
joined first session     >= 80 %   (50 / 60)
active in 3+ sessions    >= 70 %   (42 / 60)
survey median            >= 4 / 5
lecturers running quizzes  3 / 3
```

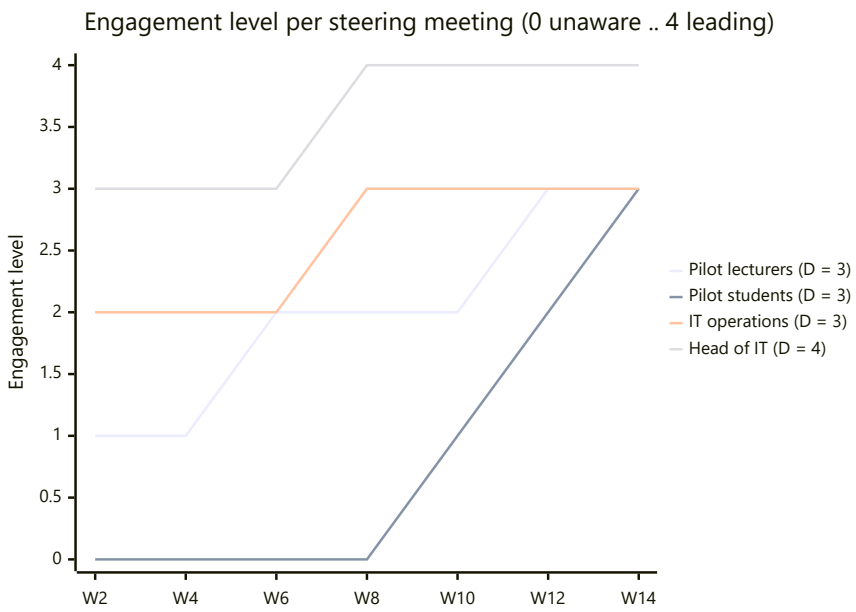

Training and adoption plan for the 50-student pilot worked example

Phase	Activity	Audience	Week	Owner	Measure
Recruit	Sponsor invites 3 lecturers personally; each picks one class (about 60 students in total)	Lecturers	W11	Head of IT	3 lecturers confirmed in writing
	Class announcement, join-code poster, transparency note	Students	W12	Lecturers	55 registered
Train	45-minute lecturer workshop: author a 5-question quiz, run a session, export CSV	Lecturers	W12	Team lead	Each lecturer has authored one quiz
	10-minute in-class demo quiz "How well do you know the campus?"	Students	W13	Lecturers, team	50 joined
Support	One team member present in the first two live sessions; chat channel; 1-page guide	Both	W13, W14	Team	Issues resolved during the session
	Paper fallback pack and result re-entry procedure	Lecturers	W13	Team	Fallback ready, used 0 times
Feedback	3-question survey after each session; 30-minute focus group with 6 students	Students	W14	PM	Median at least 4 of 5; 42 active
	Lecturer debrief and adoption decision for next semester	Lecturers, sponsor	W14	PM	Decision recorded in the steering minutes

```
After-session survey (1 minute, anonymous)
1. Joining and answering worked
   on my device.              1 2 3 4 5
2. The quiz helped me understand
   today's topic.             1 2 3 4 5
3. The leaderboard felt fair.
                              1 2 3 4 5
Free text: what should we change
before next week?
```

Training the lecturers *before* the students protects their status in class: nobody wants to learn a tool in front of 50 students.

Monitoring engagement over time

- Re-rate C for every stakeholder before each steering meeting; the chart is the assessment matrix over time.
- A flat line on a gap is a signal: lecturers stayed at 2 from W6 to W10, so the plan added a one-to-one with the third lecturer in W9.
- Rate on evidence: attendance, decisions taken, workshop sign-ins, survey scores, app metrics, tone in the chat channel.

```
Engagement index (mean level, 4 tracked stakeholders)
W2 : (1 + 0 + 2 + 3) / 4 = 1.50
W8 : (2 + 0 + 3 + 4) / 4 = 2.25
W14: (3 + 3 + 3 + 4) / 4 = 3.25   target 3.25 reached
Gap sum W2 = (3-1)+(3-0)+(3-2)+(4-3) = 7 steps
Gap sum W14 = 0
```

Adapting the plan: indicators, triggers and the review log

Indicator	Source	Target	Trigger to adapt
Steering attendance	Minutes	Sponsor and ops at every meeting	One absence: 1:1 within a week
Decision lead time	Decision log	3 working days or less	Over 5 days: use the Dean path
Engagement index	Matrix, every 2 weeks	+1 level per 4 weeks on open gaps	No movement in 4 weeks: change tactic
Workshop attendance	Sign-in sheet	3 of 3 lecturers	Any absent: shadow session
Adoption rate	App metrics (open sessions gauge)	70 % or more	Under 60 % after session 2: in-class support
Survey median	After-session survey	4 of 5 or more	Under 3.5: focus group within 3 days
Public complaints	Issue tracker, e-mail	0	Any: crisis protocol (Lab-11 challenge)

```
## Engagement review W8 (after the MVP demo)

| Stakeholder     | C (W6)    | C (W8)     | D          | Evidence            |
|-----------------|-----------|------------|------------|---------------------|
| Pilot lecturers | Resistant | Neutral    | Supportive | CSV import, 2 of 3  |
| IT operations   | Neutral   | Supportive | Supportive | proxy rule approved |
| Pilot students  | Unaware   | Unaware    | Supportive | announcement in W12 |

Decisions
- Keep E03 shadow session (W10); add E07 "1:1 with lecturer 3" (PM, W9).
- Move S08 IT operations from Keep satisfied to Manage closely until W13.
- Register updated: S13 "student union" added after a snowballing answer.
```

Adapting means changing actions, owners or timing, not lowering D to make the chart look good.

TOPIC 10

Ethics and transparency with stakeholders

- **PMI Code of Ethics** values: responsibility, respect, fairness, honesty. Stakeholder management is where they are tested first.
- **Honest reporting**: a RAG status that stays green while latency incidents pile up is a lie by omission. Report the incident, the cause and the plan.
- **Respect**: the register calls a colleague "resistant"; treat it as confidential and describe behaviour, not character.
- **Fairness**: the leaderboard motivates, but a public ranking can shame. Students get the nickname option and results stay inside the class.
- **Transparency about data**: students are stakeholders whose data the app collects. Say what, why, who sees it, how long, and how to opt out, before the first session.
- **Conflicts of interest**: the PM grades the team in the SE course; acceptance is signed by the senior user, not by the PM.

ⓘ "Engagement" that hides information to steer a stakeholder towards the answer you want is manipulation, not stakeholder management.

```
# Transparency note for pilot students (join page, W12)

**What we collect.** Your nickname or account name, your answers,
the time you took, your score and your device type. We do not
collect your location or your contacts.

**Why.** To show the leaderboard in class and to let your lecturer
review the results of the session.

**Who sees it.** Your lecturer (all results of the class), you (your
own results), the project team (anonymised, for bug fixing). The
ranking is never published outside the class.

**How long.** Results are kept for this semester. You can ask the
project manager to delete your data at any time.

**Your choice.** You may join with a nickname instead of your name.
Taking part in the pilot has no effect on your grade.

Questions: project manager, office 2.14, or the #quiz-pilot channel.
```

WRAP-UP

Best practices and common mistakes

1 Identify early, then again

Walk the onion in week 2 and at every phase gate. New stakeholders appear when the product becomes visible.

2 Ask, do not assume

Expectations and attitude come from conversations, not from the org chart. Write them down and confirm them back.

3 Use the influence map

When a direct path is weak, engage through the Dean, the sponsor or a champion lecturer. Multiply the weights before you choose.

4 One sponsor, written commitments

The one-page agreement turns "supportive" into decisions in 3 days, a chaired board and a briefed Dean.

5 Involve users before training them

A user group from W4, acceptance criteria in user language, training short and late, adoption measured through the funnel.

6 Review every two weeks

Re-rate C with evidence, log the review, change actions when a line stays flat. Never lower D to look good.

✕ Mistake: one message for everyone

The same status e-mail to the Dean, the DPO and 50 students engages nobody. Quadrant and level decide the channel and the ask.

✕ Mistake: information instead of engagement

Sending the plan is not involving people in it. Resistant stakeholders need a conversation, an option and a quick win.

✕ Mistake: green-washing the status

Hiding a latency incident from the sponsor buys one quiet week and costs the trust you need in the crisis.

Chapter quiz 10 questions

1. According to the PMBOK Guide, who counts as a stakeholder?

- ○ Only people who fund or approve the project
- ○ Only the users of the product
- ○ Anyone who may affect, be affected by, or perceive themselves affected by the project
- ○ Only people listed on the org chart

2. IT operations has high power and low interest in the Realtime Quiz pilot. Which strategy does the power/interest grid suggest?

- ○ Manage closely
- ○ Keep satisfied
- ○ Keep informed
- ○ Monitor

3. In the salience model, a stakeholder with power, legitimacy and urgency is called

- ○ Dominant
- ○ Dependent
- ○ Dangerous
- ○ Definitive

4. Influence map: the Dean moves the Head of IT with weight 0.9 and the Head of IT moves the lecturers with weight 0.7. Path strength Dean to lecturers?

- ○ 1.6
- ○ 0.63
- ○ 0.2
- ○ 0.9

5. Which engagement level lies between Resistant and Supportive?

- ○ Unaware
- ○ Neutral
- ○ Leading
- ○ Dormant

6. In the engagement assessment matrix, C and D stand for

- ○ Cost and duration
- ○ Current and desired engagement level
- ○ Communication and decision
- ○ Champion and detractor

7. Adoption funnel: 60 students invited, 42 active in three or more sessions. Adoption rate?

- ○ 42 %
- ○ 60 %
- ○ 70 %
- ○ 84 %

8. Engagement index with levels Unaware 0 to Leading 4. Four stakeholders are rated 1, 0, 2 and 3. Index?

- ○ 1.5
- ○ 2.0
- ○ 3.0
- ○ 6.0

9. A pilot lecturer says "paper never crashes, I will not use the app". Best first action?

- ○ Escalate to the sponsor so the lecturer is told to comply
- ○ Find out the concern behind the statement and offer an option such as a paper fallback
- ○ Remove the lecturer from the register
- ○ Send the project plan again

10. Which practice follows the transparency principle for students in the pilot?

- ○ Publishing the full ranking on the faculty website
- ○ Telling students what is collected, why, who sees it and how to opt out before the first session
- ○ Collecting device location to improve latency
- ○ Keeping the data-collection note until after the pilot

WRAP-UP

Summary

A stakeholder is anyone who affects, is affected by, or believes they are affected by the project: sponsor, users, operations, vendors, regulators, the public.

The register holds one row per stakeholder with expectations, power, interest, attitude and a classification; it is confidential and reviewed at every phase gate.

Power/interest gives four strategies (manage closely, keep satisfied, keep informed, monitor); salience adds legitimacy and urgency; the influence map finds the path.

Engagement levels run unaware, resistant, neutral, supportive, leading; the assessment matrix marks current (C) and desired (D) for each stakeholder.

The engagement plan closes each gap with actions that have an owner, a week in the schedule and a measure; it refers to the communication plan instead of duplicating it.

Resistance is information: find the concern behind it, offer an option and a quick win, and escalate only after listening.

A one-page sponsor agreement and a steering board with terms of reference turn goodwill into decisions, budget and visibility.

Users are involved early, accept in their own words, are trained late and briefly, and adoption is measured through a funnel.

Monitor engagement every two weeks with evidence, adapt actions rather than targets, and stay honest and transparent, especially about the data you collect.
